**I nuovi veicoli volanti**

*New Flying Vehicles*

*Unlike amphibious vehicles, such as hovercrafts, able to soar on the surface of the water and to move on dry land, or hydroplanes, which have a double environmental impact or the revolutionary «ekranoplane», which flies nearly as an aircraft and sails like a ship, the new flying vehicle, «Transition», built in the U.S. in the Terrafugia plant, changes shape and turns into a car or a flying vehicle in less than a minute.*

*This article focuses on the problem of registration of this particular hybrid transport vehicle in the public registers, on the abnormal case of double registration of mortgages and on the double insurance obligations for the owner of a car and of a flying vehicle.*
